Indian Statistical Institute, Chennai Centre

<u>Seminar Announcement / संगोष्ठी की घोषणा</u>

Date/ तारीख   : 06thOctober, 2016

Time/ समय   : 4 PM - 5 PM

Venue/ स्थान   : SETS Auditorium, ISI-Chennai.

Speaker/ वक्ता : Arnab Chakrabarti

Title/ शीर्षक: Bootstrap Method for Analysis of Dependent Data

Abstract: Bootstrap is a widely used statistical technique that is able to deal with a wide range of statistical inference problems without stringent structural assumptions on the underlying random process generating the data. Efron, in 1979, developed it for data with identically and independent observations. The literature on Bootstrap method for independent data is quite extensive. In this talk we are going to discuss some of the established Bootstrap methods for non-iid data, for example time series data.

सभी को आमंत्रित कर रहे हैं|

All are invited.
