

ANALYSIS OF RECALL BASED TIME TO EVENT DATA: A HAZARD RATE APPROACH

Sudheesh K Kattumannil

Indian Statistical Institute, Chennai, India.

ABSTRACT. In survival studies, subject under consideration is observed at particular time point and asked to recall the time to event of interest, if it has already occurred. In this talk, we proposed a new technique to analyze such recall based time to event data. After discussing the basic concepts in survival analysis I will explain the proposed method in detail.
